MDPI - Publisher of Open Access
Journals - Classification. Infant
mortality rate (IMR) is the
number of deaths per 1,000 live
births of children under one year
of age. The rate for a given region
is the number of children dying
under one year of age, divided by
the number of live births during
the year, multiplied by 1,000.

ExtensionExtension - Abstract.
Jaundice occurs in most newborn
infants. Most jaundice is benign,
but because of the potential
toxicity of bilirubin, newborn
infants must be monitored to
identify those who might develop
severe hyperbilirubinemia and, in
rare cases, acute bilirubin
encephalopathy or kernicterus.
